at the Governor James J. Florio Special Events Forum, Edward J. Bloustein School of Planning and Public Policy
33 Livingston Avenue, New Brunswick, NJ
on the campus of Rutgers University

Accelerating the Transition to a Clean, Equitable, and Resilient Transportation Future

Presented by

Vicki Arroyo
Executive Director, Georgetown Climate Center; Professor from Practice and Assistant Dean, Centers and Institutes, Georgetown University Law Center

Climate change is already affecting our region, the U.S., and the planet, bringing risks to public health and safety as well as to our infrastructure and communities. The transportation sector is now the leading source of greenhouse gas emissions, and is also quite vulnerable to the impacts of a changing climate. Hear what’s at stake and the steps that leaders in states and communities are taking to reduce emissions and shift to cleaner transportation alternatives while preparing for climate change impacts, including heat waves, intense storms, and rising seas.

Vicki Arroyo is Executive Director of the Georgetown Climate Center which serves as a leading resource to states and communities working to curb emissions that cause climate change and to adapt to its impacts and is also a Professor and Assistant Dean at Georgetown University Law Center. She also currently chairs the Transportation Research Board of the National Academies of Sciences, and facilitates the Transportation and Climate Initiative, a regional collaboration of 12 states (including NJ) and DC working to promote a cleaner and more resilient and equitable transportation future.

The Alan M. Voorhees Transportation Center (VTC) seeks to lead an informed public discussion of transportation policy issues. In the context of New Jersey as a living laboratory, VTC is committed to conducting research and finding innovative approaches to transportation problem solving. The VTC Distinguished Lecture honors its namesake Alan M. Voorhees, one of the nation’s pivotal figures in city planning and transportation concerns.

Rutgers Climate Institute facilitates climate change scholarship, education and outreach across Rutgers University in an effort to understand the mechanisms that drive climate change as well as its human and social dimensions, and to inform and educate society about the causes and consequences of climate change.

1.5 AICP CM credits.
Free and open to the public.
Lecture will begin at 5:30 p.m. Guests are invited to attend a reception beginning at 5:00 p.m.
RSVP requested by visiting http://go.rutgers.edu/mwusqzbd
